SONAR's Lane Score is Now Available

Access Market Pricing Intelligence by Transportation Lane Directly in Descartes MacroPoint™ Capacity

This integration delivers a critical indicator of lane attractiveness which, combined with the calculated inbound capacity score from the Descartes MacroPoint Capacity network, provides immediate insight into current market conditions across the North American over-the-road network. Together, Descartes and FreightWaves facilitate & automate load coverage decision-making processes by providing critical data points to prioritize and execute in a reliable and more cost-effective way.

ABOUT THE PRODUCT

Descartes MacroPoint Capacity allows users to search its network and contact over 280,000 carriers & their assets on more than 1 million transportation lanes in North America. The lane network shows available carrier density, helping prioritize loads where capacity is constrained.

TOP BENEFITS

- Simplify & streamline the capacity procurement process
- Save time with immediate access to real-time lane data
- Enable confident decisions by users based the market

"We are LOVING the new integration! Our users are able to prioritize their efforts and feel more confident in taking a higher rate to guarantee moving the load when the score is low and are empowered negotiating when the score is high. Seeing the score reduces the need for manual entry and review of the lane data using external program sources – big time saver and drew users into the program."

Connie Morgan, Director, Truckload Pricing and Procurement
